## ECOSYSTEM

**CryptoRose** is a DeFi platform built on Binance Smart Chain.

Inheriting values and strengths as well as removing the drawbacks from the other DeFi projects like Uniswap, Sushiswap, 1inch, Pancakeswap, etc, the platform is believed to become one of the most notorious projects in the DeFi world. As can be seen, "decentralization" is the future of cryptocurrency. It secures personal ownership and anonymity in transactions, and contributes to make a closed ecosystem for cryptocurrencies, which are full of shortcomings in the current platforms. With that concept, the core team creates an ecosystem including **CryptoRose Swap, Gaming project, NFT platform, Farming & Staking** advantage many more. The protocol that **CryptoRose** uses is BSC (Binance Smart Chain), which is the most modern protocol which can magically boost the speed of transactions and, at the same time, the other features are extremely versatile. Moreover, BSC transaction cost is much cheaper than another popular protocol –Ethereum network. The ecosystem also includes **CryptoRoseSwap, Gaming project, CryptoRose IDO Launchpad, NFT platform** the symbols of which show the most famous super projects of **CryptoRose**.

Those **CryptoRose** projects are in development & coming soon to the community!

## HOW DOES IT WORKS ?

**CryptoRose** works on the automated market maker (DeFi) model instead of the traditional market model, in which there is a seller and a buyer. In the DeFi model, traders trade digital assets using permissionless liquidity pools. People deposit their funds in these liquidity pools. They receive an LP (liquidity provider) token in return. They also receive a fee for making their assets available for lending. Liquidity Provider receives amount of 2% when others contribute. **CryptoRose** has no rewards program but receives contributions from the ecosystem. On the other side, people who want to use this liquidity pay a fee to the DeFi platform. This fee is later distributed among people who have contributed to the pool. Out of this pool, a nominal amount is kept in the **CryptoRose** treasury to maintain the platform. The DeFi model lets you earn by creating liquidity for the pool. The more you contribute, the more you get in return. You can trade LP tokens for profits. In addition, they can be farmed in another type of liquidity pool to earn **CryptoRose's** native BEP- 20 tokens known as **CryptoRose**. People can stake their tokens to earn even more rewards from the liquidity pools.

## WHAT CAN YOU DO ?

The first thing you need to do on the **CryptoRose** platform is to add liquidity to the pool. People invest in the liquidity pools and collect a fee and **CryptoRose** in exchange. These are all BEP-20 standard tokens. Investors use these tokens in various ways to earn profits on the **CryptoRose**.

**Trading:** It supports trading in BEP-20 tokens. It is very similar to crypto trading.

**Farming:** The LP tokens earned by adding liquidity previously can be farmed in the **CryptoRose** platform, which provides a way to collect its own governance coin **CryptoRose**.

**Staking:** You can stake **CryptoRose** in the staking pools to earn even more rewards. Once you decide to cash in the rewards, you have to harvest the crop. You end up locking in your investment for a fixed time. Staking is a lot simpler for beginners, as you don't need to do everything on your own. Once you have staked your **CryptoRose**, you can relax and earn a passive income.

## CENTRE TOKEN

**CryptoRose**, the centre token is an BEP20 token. The max supply is 25,000,000 and one of its key functionalities is its decentralized farming mechanism. The **CryptoRose** Token Smart Contract successfully passed a top-grade security audit to further the community's confidence, in full transparency. **CryptoRose** is a fully decentralized and community driven project - **CryptoRose** liquidity pools and listings are constantly added by many completely independent enthusiasts and supporters.
